# Protecting your privacy and security when using mobile apps

## Four quick tips to remember!

1

#### Do a quick search

Before downloading a new app, check if there are any known privacy and security concerns associated with it.

2

### Pause before granting permission

Be cautious about what permissions you are giving to the app and determine what data should not be disclosed when you sign up.

3

#### Review the terms & conditions

Read the applications' privacy policies and terms and conditions to be aware of their data-collection and sharing policies.

Consider the source

Download apps from trusted sources like Apple App Store or Google Play to limit the risk of spyware and other vulnerabilities which may lead to cybersecurity attacks.
